S-GC Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).

R-09 The Reporting Limit for this analysis has been raised to account for matrix interference.

M2 Matrix spike recovery was low, the associated blank spike recovery was acceptable.

J Parameter was present between the MDL and RL and should be considered an estimated value

D1 Sample required dilution due to matrix.

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

Recoveries for 8270 matrix spike compounds anthracene in the batch B1G0503 MS and fluorene in the MS/MSD were below laboratory limits. The MS/MSD source sample was not associated with this work order. All target analytes were within limits in the LCS.

Recovery for the 8270 surrogate 2-fluorobiphenyl in the batch B1G0503 MS/MSD was below laboratory limits

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint.

Recoveries for several 8270 matrix spike compounds were below laboratory limits in the batch B1G0607 MS/MSD due to sample matrix interference. The MS/MSD source sample was not associated with this work order. All target analytes were within limits in the LCS.

Recovery for the 8270 surrogate 2-fluorobiphenyl was below laboratory limits in sample E7-SS3_0.5-0.5.

Case Narrative:

MDH does not offer certification for the following parameters: dichlorofluoromethane, tetrahydrofuran, and 1,1,2-trichlorotrifluoroethane in the 8260B analysis and carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: 8330 analysis.

Recoveries for 8270 matrix spike compounds 2-chlorophenol, n-nitrosodi-n-propylamine and phenol were outside of laboratory limits in the water batch B1G0804 MS/MSD. The MS/MSD source sample was not associated with this work order. All target analytes were within limits in the LCS.

Recoveries for the 8270 surrogates 2-fluorobiphenyl in sample M-1 and terphenyl-d14 in sample M-2 were outside of laboratory limits

Recoveries for tetryl in the 8330 soil MS/MSD samples were below the laboratory control limits. The LCS sample was within limits. The MS/MSD source sample was not associated with this work order.

Recovery for tetryl in the 8330 water LCS/LCSD/MS were below laboratory limits in batch B1G1107. The corresponding LCS/LCSD %RPD was slightly above the laboratory limit. The MS source sample was FB-713A-TT1-0.5.

Notes and Definitions

- S-GC Surrogate recovery outside of control limits. The data was accepted based on valid recovery of the remaining surrogate(s).
- R2 RPD/RSD exceeded the laboratory acceptance limit. See case narrative.
- QM-11 Spike recovery was outside of laboratory limits
- QM-05 The spike recovery was outside acceptance limits for the MS and/or MSD due to matrix interference. The LCS and/or LCSD were within acceptance limits showing that the laboratory is in control and the data is acceptable.
- M2 Matrix spike recovery was low, the associated blank spike recovery was acceptable.
- L2 The associated blank spike recovery was below laboratory acceptance limits.
- J Parameter was present between the MDL and RL and should be considered an estimated value
- H3b The trip-blank sample was received and analyzed past holding time.
- < Less than value listed
- dry Sample results reported on a dry weight basis
- NA Not applicable. The %RPD is not calculated from values less than the reporting limit.
- MDL Method Detection Limit
- RL Reporting Limit
- RPD Relative Percent Difference
- LCS Laboratory Control Spike = Blank Spike (BS) = Laboratory Fortified Blank (LFB)
- MS Matrix Spike = Laboratory Fortified Matrix (LFM)

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint.

An LCS/LCSD were prepared and analyzed for 8270 batch B1G1306 instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

Recoveries for the 8270 surrogates phenol-d6 in sample M-2, and terphenyl-d14 in samples 108B-SS1_0.5-0.5 and 501C-SS1_0.5-0.5 were outside of laboratory limits

Case Narrative:

LCS/LCSD were prepared and analyzed for the batch B1G2904 instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

At the client's request, this report was revised on August 1, 2011 to include a second sample for SVOC analysis. The client instructed the laboratory to create the second sample by sub-sampling the first sample using more of the white material present along with some of the soil.

Case Narrative:

MDH does not offer certification for the following parameters: dichlorofluoromethane, tetrahydrofuran, and 1,1,2-trichlorotrifluoroethane in the 8260B analysis and carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint and the 8330 analysis.

An LCS/LCSD were prepared and analyzed for 8270 batch B1G1306 and 8330 batch B1G1811 instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

Methylene chloride was detected in the method blank between the MDL and RL for 8260 batch B1G1512. Samples with methylene chloride detections less than or equal to 10 times the blank contamination are qualified.

Recovery for n-Butylbenzene was slightly above 8260 laboratory limits in the batch B1G1512 MSD. All spike compounds were within limits in the LCS/MS. The MS/MSD source sample was 715B-TT1_0.5-0.5.

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

Recovery for the 8270 surrogate 2-fluorophenol was below laboratory limits in sample CAP-TT3_1-1.

Recovery for the 8270 surrogate phenol-d6 was below laboratory limits in sample OP-TT2_2-2 and OP-TT1_2-2.

The %RPD for most of the 8081A compounds were outside laboratory acceptance limits in the water batch B1G1502 LCS/LCSD. However, the recoveries were within acceptance limits. An LCS/LCSD were prepared and analyzed instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

Recovery of endrin aldehyde and surrogates decachlorobiphenyl and tetrachloro-meta-xylene were outside laboratory acceptance limits in the 8081A water batch B1G1502 LCS but within limits in the LCSD. Endrin aldehyde was not detected in sample FB-OP-TT3-2.

Recovery for the 8081A surrogate decachlorobiphenyl in sample M-4 and tetrachloro-meta-xylene in sample FB-OP-TT3-2 were above laboratory limits.

An LCS/LCSD were prepared and analyzed for water 8082 batch B1G1503 instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

Recoveries of the 8082 surrogates decachlorobiphenyl and tetrachloro-meta-xylene were above laboratory acceptance limits in the water batch B1G1503 BLK/LCS/LCSD and sample FB-OP-TT3-2. The spike recoveries were acceptable in the LCS/LCSD. Target analytes were not detected in sample FB-OP-TT3-2; therefore, there is no data bias.

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

Recovery for the 8270 surrogate terphenyl-d14 was above laboratory limits in samples CAP-TT7_0.5-0.5, OP-TT4_1-1, OP-TT7_0.5-0.5, OP-TT8_0.5-0.5 and 228A-TT1_0.5-0.5.

Recoveries for b-BHC, d-BHC, 4,4'-DDE and 4,4'-DDD were above the method acceptance limits and recoveries for 4,4'-DDT, and methoxychlor were below the method acceptance limits in the ending 8081A continuing calibration verification standard (CCVS). However, following calibration evaluation procedures per EPA 8000B, the average % difference for all analytes was within the method limit, verifying the calibration. The specific analytes are flagged as required.

Recovery for 4,4'-DDT was above laboratory acceptance limits in the 8081A batch B1G2201 MSD but within limits in the LCS and MS. The source sample was not associated with this work order.

This report was revised on July 29, 2011 to include the RCRA ICP metal results.

Case Narrative:

MDH does not offer certification for the following parameters: dichlorofluoromethane, tetrahydrofuran, and 1,1,2-trichlorotrifluoroethane in the 8260B analysis and carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint.

Methylene chloride was detected in the method blank between the MDL and RL for 8260 batch B1G1512. Samples with methylene chloride detections less than or equal to 10 times the blank contamination are qualified.

Recovery for n-Butylbenzene was slightly above 8260 laboratory limits in the batch B1G1512 MSD. All spike compounds were within limits in the LCS/MS. The MS/MSD source sample was not associated with this work order.

Recovery for mercury in the MS/MSD samples for batch B1G2605 were below the laboratory control limits. The LCS/LCSD samples and corresponding RPDs were within limits. The MS/MSD source sample was 217A-TT2_1-1.

This report was revised on July 29, 2011 to include the RCRA ICP metal results.

Case Narrative:

MDH does not offer certification for the following parameters: dichlorofluoromethane, tetrahydrofuran, and 1,1,2-trichlorotrifluoroethane in the 8260B analysis and carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint.

Recoveries for the 8270 surrogates terphenyl-d14 in sample U-SanC5-1 and 2-fluorobiphenyl in sample U-PB6-1 were below laboratory limits.

Recoveries for b-BHC, d-BHC, 4,4'-DDE and 4,4'-DDD were above the method acceptance limits and recoveries for 4,4'-DDT, and methoxychlor were below the method acceptance limits in the ending 8081A continuing calibration verification standard (CCVS). However, following calibration evaluation procedures per EPA 8000B, the average % difference for all analytes was within the method limit, verifying the calibration. The specific analytes are flagged as required.

Recovery for 4,4'-DDT was above laboratory acceptance limits in the 8081A batch B1G2201 MSD but within limits in the LCS and MS. The source sample was not associated with this work order.

Recovery for mercury in the MS/MSD samples for batch B1G2605 were below the laboratory control limits. The LCS/LCSD samples and corresponding RPDs were within limits. The MS/MSD source sample was not associated with this work order.

This report was revised on July 29, 2011 to include the RCRA ICP metal results.

Case Narrative:

MDH does not offer certification for the following parameters: dichlorofluoromethane, tetrahydrofuran, and 1,1,2-trichlorotrifluoroethane in the 8260B analysis and carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: chloride, nitrate+nitrite as N, sulfate, and perchlorate.

Nitrate as N recoveries in the MS/MSD samples exceeded laboratory control limits. Recoveries in the LCS/LCSD samples and the corresponding RPDs were within limits. The MS/MSD source sample was MW-28.

Nitrite as N recoveries in the MS/MSD samples exceeded laboratory control limits due to sample matrix interference. Recoveries in the LCS/LCSD samples and the corresponding RPDs were within limits. The MS/MSD source sample was MW-28.

Case Narrative:

MDH does not offer certification for the following parameters: carbazole in the 8270C analysis.

MPCA does not require certification for the following parameters: flashpoint.

Recoveries for b-BHC, d-BHC, 4,4'-DDE and 4,4'-DDD were above the method acceptance limits and recoveries for 4,4'-DDT, and methoxychlor were below the method acceptance limits in the ending 8081A continuing calibration verification standard (CCVS). However, following calibration evaluation procedures per EPA 8000B, the average % difference for all analytes was within the method limit, verifying the calibration. The specific analytes are flagged as required.

An LCS/LCSD were prepared and analyzed for 8081A water batch B1G2005 instead of the method specified LCS/MS/MSD. Insufficient sample was received to meet method QC requirements.

Recovery for 4,4'-DDT was above laboratory acceptance limits in the 8081A batch B1G2201 MSD but within limits in the LCS and MS. The source sample was sample GC-SS3_0.5-0.5.

Recovery for mercury in the MS/MSD samples for batch B1G2605 were below the laboratory control limits. The LCS/LCSD samples and corresponding RPDs were within limits. The MS/MSD source sample was not associated with this work order.

This report was revised on July 29, 2011 to include the RCRA ICP metal results.
